F-EMP

Environmental Sensor

Temperature / Humidity Sensor for F-SNMP

ION environmental probe (F-EMP) is a connective device that enables you to connect temperature and humidity readings in the environment and monitor the environmental data remotely. You can also collect and retrieve the status of two contact devices. You can monitor readings remotely using a standard web browser. This provides greater power management control and flexible monitoring options. The F-EMP is delivered with a screw, Velcro fasteners, tie wraps and a connection cable. You can install the device anywhere near the Network Management card (F-SNMP) either in the cold aisle of the computer room to assess the air temperature that is going to your equipment or the hot aisles.

F-EMP FEATURES

- 3 year advanced replacement warranty*
- Hot Swappable
- Ability to monitor temperature and humidity from 0°C to 70°C with an accuracy of $\pm 2^\circ$
- The F-EMP can monitor the status of two user - provided devices
- Temperature, humidity and contact closure status can be displayed through a web browser
- User selectable alarm thresholds enable you to define acceptable temperature or humidity limits
- Compatible with F-SNMP Network Management Card
